

## D-Light Triple Play services [www.d-light.at](http://www.d-light.at)

D-Light offers as one of the first telecom providers worldwide a Net Top PC for Triple Play and Multimedia services. This Net Top or Home Theater PC replacing traditional Set Top Boxes and is the base for a new and next generation telecom multi-media experience.

TV and Internet merging therefore allowing flexible and inexpensive home entertainment adapting to flexible needs of clients. User can access the World Wide Web via a Firefox browser or can access additional content similar to their smartphone apps and can surf in their media libraries, YouTube, Apple trailers, Weather information can be accessed like on Smart Phones. Thanks to a new update server, customers can control and update additional content including apps and program options.

## Integration of TV and Internet

The D-Light Multimedia Center combines the latest multimedia-streaming technology for TV, Radio and Multimedia Content to play, record, archive and manages the content. A simple user interface allows consumers easy to handle experience for classic entertainment to watch television, to play DVDs and audio CDs, but also the convenient Internet browsing via the built-in flash enabled Firefox browser on TV. In addition to a pay per view video store the Multimedia Center opens access for free to use media libraries via Internet or from a personal digital video recorder to play back recorded content, self-stored digital videos or pictures to be displayed in a slide show. It access up to 1,000 Internet radio stations from the EU countries via an IP Stream as well as provides with "classic television" an electronic program guide for searching TV channels and for easy programming of the recorder.

## All in One Multimedia Center

The D-Light Multimedia Center is based on a Net Top PC (Home Theatre PC) and a feature rich Media Center, specially adopted and developed for D-Light. It is a multimedia center software that is used for playing videos, pictures and music from your hard disk and server and the playback of audio and video data streams from the Internet. The user can arrange the media content in catalog files, organize, display, play even pictures in a slide show. Unlike standard media player the D-Light multimedia center access additional content from the Internet to provide the user with added value compared to standard streamer playback functions. The program retrieves movie posters, cast lists, captions, or trailer, the user can query the touch of a button.
